                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           L Submitted (18-APR-2000) Josephine Bay Paul Center for Comparative Molecular Biology and Evolution, Marine Biological Laboratory, 7 MBL Street, Woods Hole, MA 02543-1015, USA ** NOTE: This record contains 1 individual ** sequencing reads that have not been assembled into ** contigs. Runs of N are used to separate the reads ** and the order in which they appear is completely ** arbitrary. Low-pass sequence sampling is useful for ** identifying clones that may be gene-rich and allows ** overlap relationships among clones to be deduced. ** However, it should not be assumed that this clone ** will be sequenced to completion. In the event that ** the record is updated, the accession number will ** be preserved.

16-JUN-1998 (first entry)

K. oxytoca R-specific amidohydrolase genomic DNA.

K. systelfic amidohydrolase; hydrolysis; racemate; nitrogen 3,3.3-trifluoro-2-hydroxy-2-methyl propionamide; isoform; Klebsiella oxytoca.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels

Discussions of parameters of synthase. Also claimed are nadB which codes for the codes for guinolinic acid synthase. Also claimed are nadB which codes for L-aspartate oxidase and genetically transformed microorganisms contg. Plasmids bearing nadA and nadB DNA in a copy ratio of 50:200, 8:50 or 8:200. Isolated chromosomal DNA was digested with HindII to obtain 6 and 8 kb fragments, which were inserted into pBR322 and cloned in E. coli NK6042 to obtain plasmid pQAB510. This was digested with HindIII and NruI cto obtain a 3.2 kb fragment, which was inserted in pBR322 to produce pQAB color obtain plasmid pQAB10. This was digested with colored in pUC18 to obtain pQAB203. This was digested with colored in pUC18 to obtain pQAB203. This was digested with inserted into pLG339 and cloned in E. coli RF1 to obtain the pAB colored in E. coli 431 to give pQAB104. This was digested with Alu1, ligated with HincIII-cleaved colored in E. coli 431 to give pQAB16. This was digested with honey. This was digested with honey. This was digested with honey pQAB104. Which was inserted into PSII. Colored in E. coli 431 to give pQAB16. This was digested with CC pUC18 and cloned in E. coli 431 to give pQAB16. This was digested with colored a transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Cr Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. Transformation of E. coli w4546 successively with pQAB 104 and pQAB 169. The pQAB 169 169 and pQAB 169 169 and pQAB 169 169 and pQAB 169 169 and pQAB 169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 1; Page 6; 24pp; English.
The sequence is that of a PCR primer which was used in the amplification of a ca. 900 bp long fragment, pBM37, contg. the C-terminal end of lacS from FspI linearised pDP228. The primer introduces a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      It codes for quinollinic acid synthase. Also claimed are nadB which codes for quinollinic acid synthase. Also claimed microorganisms contging Laspartate oxidase and genetically transformed microorganisms contgiplasmids bearing nadA and nadB in a copy ratio of 200:50 or 200:8.

Transformation of E. coli W4546 successively with pQAB 520 and pQAA 168 produced a transformant with a 200:50 copy ratio, giving quinolinic acid in yields which were ca. 7:5-9.7 times those obtained using W4546. The microorganisms give high yields in a reproducible manner. Quinolinic acid is an intermediate for pharmaceuticals and plant protection agents. Sequence 1724 BP; 408 A; 432 C; 470 G; 414 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The nadA nucleotide sequence used in effecting prodn. of quinollnic acid Quinolinic acid consolutions acid production; nadA; nadB; pharmaceutical intermediate; plant protection agent intermediate; quinolinic acid synthase; L-aspartate oxidase; Escherichia coli W4546.
                                                                                                                                                                                                                        Claim 73; Page 32-34; 68pp; farman.

This DNA sequence encodes a R-specific amidohydrolase isolated from Klebsiella oxytoca strain PRS1 which allows the microrganism to utilise 3.3,3-trifluoro-2-hydroxy-2-methyl propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R) isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide which its cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-()-alpha methylbenzylamine.

The sequence is that of a PCR primer which was used in the amplification of a ca. 700 bp long fragment, pBM38, contg. the C-terminal end of lacs from FspI linearised pDP228. The PCR amplification was performed as part of the construction of donor plasmids for the integration of the cat gene into the lac operon.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
The sequences given in 051467-72 are primers which were used in the stable integration of homo- or heterogenic genes into the Streptococcus thermophilus genome. These plasmids which allowed create restriction sites within donor plasmids which allowed insertion of the required genes into the S. thermophilus genome. S. thermophilus transformed in this way may be used in the production of an artificial milk product, especially yohgurt. Integration is stable and follows a strict copy number control of the host genome. The integrated gene may be expressed without the need for direct selection, observable phenotype or adaptation of the growth medium. Sequence 26 BP; 4 A; 5 C; 3 G; 14 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in 051467-72 are primers which were used in the stable integration of homo- or heterogenic genes into the Strable integration of homo- or heterogenic genes into the create restriction sites within donor plasmids which allowed insertion of the required genes into the S. thermophilus genome. S. thermophilus transformed in this way may be used in the production of an artificial milk product, especially yohgurt. Integration is stable and follows a strict copy number control of the host genome.

This sequence encodes the human haematopoietic stem cell growth factor (SCGF) of the invention. The polypeptide of the invention is of mammalian origin and has haematopoietic stem cell growth factor SCGF activity, including burst-promoting activity (BPA) and granulocyte macrophage colony stimulating activity (GPA). The products can be used for treatment, diagnosis and analysis of haematopoietic cell disorders and bone marrow inhibition, e.g. by cytotoxic anticancer agents such as 5-fluorouracil. The products can also be used for amplification of haematopoietic cells in vitro, e.g. for use in marrow grafting and gene therapy by insertion of SCGF gene using a suitable therapeutic vector. Breakthrough strains - useful in providing added protection against him of provided by original vaccine

Claim 6; Page 112-114; 193pp. English.

Clone C15.3 encodes a gpl20 envelope polypeptide (see W37059) of a breakthrough isolate of HIV-1 obtained from an individual infected with HIV-1 through high risk activity while participating in phase I or phase 2 trials of MN-rappl20, a candidate recombinant appl20 HIV-1 vaccine. Nucleotide sequences (see V00517-30) for gpl20 polypeptides (see W37054-67) were obtained from 2 clones of each of 7 breakthrough isolates. The envelope glycoprotein genes
                                                                                                                                                                                                                                   Haematopoletic stem cell growth factor - useful for, e.g. treatment and diagnosis of haematopoletic cell abnormalities and bone marrow inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-JUL-1998 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human immunodeficiency virus gpl20 sequences from vaccine breakthrough strains - useful in providing added protection against HIV not provided by original vaccine acclaim 6; Page 108-110; 193pp; English.

Clone C15.2 encodes a gpl20 envelope polypeptide (see W37058) of a breakthrough isolate of HIV-1 obtained from an individual infected with HIV-1 through hish risk activity while participating in Phase I or Phase 2 trials of MN-rgpl20, a candidate recombinant gpl20 HIV-1 vaccine. Nucleotide sequences (see V00517-30) for gpl20 polypeptides (see W37054-67) were obtained from 2 clones of each of 7 breakthrough isolates. The envelope glycoprotein genes were obtained from proviral DNA using PCR (see V00533-38). All 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            envelope glycoproteins persons sequences typical of subtype (clade) B viruses. The overall homology with MN-rgpl20 is 69-80%. Use of the preparathrough the gpl20 polypeptides from one or more of the breakthrough isolates, usually together with MN-rgpl20, can provide protection against HIV strains that are sufficiently different from the vaccine strain (e.g. MN-rgpl20) that the vaccine does not confer perfection against those strains.
      (clade)
envelope glycoproteins possess sequences typical of subtype (clade by furuses. The overall homology with MN-rgp120 is 69-803. Use of the gp120 polypeptides from one or more of the breakthrough isolates, usually together with MN-rgp120, can provide protection against HIV strains that are sufficiently different from the vaccine strain (e.g. MN-rgp120) that the vaccine does not confer protection against those strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                     ó

                                                                                                                                                                                                                                           New isolated Enterococcus faecalis polynucleotides - used to develop products for the detection of Enterococcus and for use in vaccines products for the detection of Enterococcus and for use in vaccines of a products for prevention or attenuation of Enterococcus infection (laim 1; Page 219; 301pp; English.

The present sequence encodes an antigenic polypeptide fragment isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                        compounds to identify agonists and antagonists of E. faecalis
      20-APR-1999 (first entry)

X20248 to X20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the Poplar (Populus trichocarpa)

and feoyl-Coh-O-methyltransferase (CCOAOMT) promoter, PICCOAOMTI, of the invention. The promoter is specific for plant or tree living vessel elements and/or xylem adjacent ray cells. The promoter is used in genetic modification to provide transgenic plants having altered light level and/or composition, which improves digestibility of forages and pulping properties of trees.
to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                              Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 32, Application US/08592541

Sequence 32, Application US/08592541

Patent No. 5986054

APPLICANT: ST. GEORGE-HYSLOP, PETER H

APPLICANT: ROWANN, JOHANNA M

APPLICANT: ROWANS, JOHANNA M

TILLE OF INVENTION: GENETIC SEQUENCES AND PROTEINS RELATED

TITLE OF INVENTION: TO ALZHEIMER'S DISEASE

YOWERSPONDENCES: 183

CORRESPONDENCE ADDRESS:

ADDRESSEE: HESTA, HURWITZ & THIBEAULT

STREET: High Street Tower - 125 High Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 475;

Sequence 27, Application US/08037816A

Patent No. S869524

GENERAL INFORMATION:

APPLICANT: Hasel, Karl W.

APPLICANT: Maddon, Paul J.

TITLE OF INVENTION: HIV-1 VACCINES, ANTIBODY COMPOSITIONS RELATED

TITLE OF INVENTION: THERETO, AND THERAPEUTIC AND PROPHYLACTIC USES

TITLE OF INVENTION: THEREOF

NUMBER OF SEQUENCES: 29

CORRESPONDENCE ADDRESS:

ADDRESSEE: Cooper & Dunham

STREET: 30 Rockefeller Plaza

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalla; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Yutaka Submitted (14-DEC-1998) to the DDBJ/EMBL/GenBank databases. Yutaka Rawarabayasi, National Institutte of Technology and Evaluation, Biotechnology Center; Nishihara 2-49-10, Shibuya-ku, Tokyo 151-0066, Japan (E-mail:kyutaka@kazusa.or.jp, Tel:+81-3-3481-8951, Fax:+81-3-3481-8424)
Kawarabayasi, Y. is officially affiliated with the National Institute of Bioscience and Human-Technology, Tsukuba, Ibaraki 305-0046, Japan.
Nomura, N. and Sako, Y. are at Kyoto University, Sakyo-ku, Kyoto 606-8502, Japan
Nomura, N. and Sako, Y. are at Kyoto University, Sakyo-ku, Kyoto 606-8502, Japan
The other authors are at the National Institute of Technology and the sequence with Hength 100 codons or more between ATG or GTG and stop codon are defined as CDS
Homology analysis is performed by Smith-Waterman algorithm against GenBank and GenBept release 109; EMBL release 56.0; SwissProt release 36.0; PIR-Protein release 57.0; and OWL release 31.0.

During 1995 to 1996 about 66% of S. pombe chromosome 1 was

Bequenced by the Sanger Centre. The sequencing of the S. pombe

genome is now being continued with funding from The European

Commission. Fourteen Buropean sequencing laboratories, including

protein coding regions (CDS) have been predicted with the help of

computer analysis using the Genefinder program in PomBase (an ACEDB

database) with additional predictions for the branch-acceptor sites

supplied by the program Späsplice. CAUTION: It is possible that for

any individual CDS we may have underestimated or overestimated the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AL132779

            IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
